

## clavisWebcatalog – SAP Online Connection for Sales and Technical Field Staff

### Mobile Live Recall of Product Catalogue Data

With clavisWebcatalog you now provide your sales team and your technical field staff with an efficient support tool: Per mouse-click the fast web application displays the complete actual stocks of all products in your SAP system. Thus the field staff can tell a customer directly on-site e.g. about prices and delivery periods of spare parts. The sales staffs are enabled to inform the customer about promotion offers based on stock on hand and to grant individual conditions.

Various features allow for an extremely user friendly application:

- Products can be selected by lots of different characteristics, e.g., all articles of a product group can be displayed including weight, price and stock on hand.
- Combined queries and multiple selections are available just as with SAP.
- The presentation of the result lists is customisable individually.
- Optionally the result list is output as PDF document or Excel file.

**Materialnummer**  
**Mehrfachselektion**

OK Abbrechen Löschen + -

Zeichen	Option	Min	Max
Include	Gleich	1030	
Include	Ungleich	1009	
Include	Zwischen	1000	1020

### Complete Integration into Order Workflow

If your customer is interested in a product, an offer can be created directly from the application according to the SAP offer create function and successively be transferred to the SAP system. Additionally the offer can be printed as PDF file or sent per email. Subsequently the offer will be converted into an order smoothly within the common SAP workflow.

## High Performance and Optimal Connectivity

clavisWebcatalog is technically based upon AJAX, a composite of JavaScript, PHP and XML. This improves performance substantially compared to a WebDynpro framework. The system can be installed in combination with all common data bases (MySQL, PostgreSQL, Oracle, Microsoft SQL Server etc.).

Fields available for product characteristics are selected individually during setup and can be customised with low effort. clavisWebcatalog uses the same languages that are generated in the SAP system – the language administration is also part of the setup. For security and comfort reasons, the user administration can be linked to the SAP system.

## With clavisWebcatalog we offer you

- a high performance application for mobile real-time recall of product catalogues
- an efficient assistance of your sales team and your technical field staff
- a lean solution with low implementation efforts
- cost-saving licenses and maintenance contracts
- a competent consulting team with business process expertise
- fast and smooth implementation
