## clavis Implements SAP Order Upload from XML

Automatical order entry has been developed for Gebr. Becker GmbH in a low cost project

The cologne based clavis berater sozietät has developed an application to process orders transferred by SAP Order-IDoc automatically. The client was the medium-sized company Gebr. Becker GmbH. Now the order information received in an XML file can be transmitted smoothly to the company's SAP system. For clavis berater sozietät was able to complete this task with very low effort, the use of this order upload tool is attractive especially for medium-sized SAP users.

The Gebr. Becker GmbH, Specialists for Vacuum Pumps and Compressors had a problem: While smaller customers used to order via telephone, email or fax one of the major customers insisted in transmitting his orders in a SAP generated IDoc. For the responsible clerks at Gebr. Becker GmbH nevertheless it was very hard to decode the respective XML file. Thus an effective way to process those ordes had to be found. However, there was no budget approved for a large systematic EDI project. The electronic import of order IDocs would only pay off if a significant amount of customers would take advantage of this option.

clavis berater sozietät was able to solve this problem by an intelligent solution. With help of a lean PC tool the XML file received from the customer is edited automatically and thus can be transferred into the order entry of Gebr. Becker GmbH SAP system without difficulty. Default values like order type or sales organisation can be initialised flexibly. An item overview is presented in a well arranged tabular form. Thus all data can be controlled thoroughly before posting.
