

SAP Fiori – the new user experience

**Make the user the center of your  
SAP applications**

For SAP ECC and S/4H

## What is SAP Fiori?

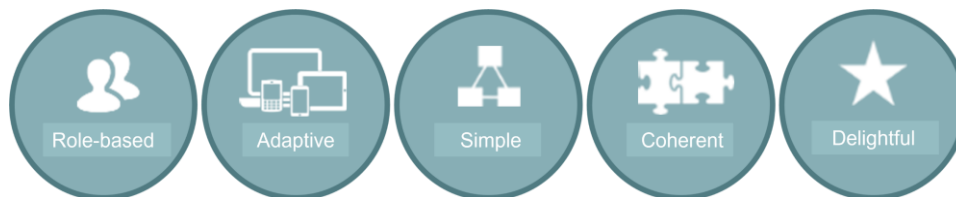

SAP Fiori is the name for SAP's new design concept. Via a central start page, the so-called Fiori Launchpad, intuitive SAP apps can be opened that are tailored to the tasks of the respective users.

<https://experience.sap.com/fiori-design-web-versions-1-26-and-1-28/>

## What are the advantages of the new SAP Fiori design?

- **Role-based:** Users only see the apps that are assigned to them and that they really need for their task area
- **Adaptive:** Fiori can be used on all modern (mobile) devices as well as in the browser. They can therefore be called up at any time from any location
- **Simple:** The Fiori apps focus on individual tasks that can be completed within three steps. This makes them significantly easier to use than the complex transactions of the SAP GUI
- **Coherent:** Fiori is applicable to all enterprise applications and provides a consistent user experience across all domains
- **Delightful:** The intuitive and user-friendly design has won several awards and enriches your work experience

## Benefits for your business:

- **Individual interface for your users:** Due to the role-based concept, users only see the apps that they actually need for their area of responsibility. The arrangement of the apps can be customized as needed.
- **Easy to use:** The apps can be operated in the same way as users are used to from modern mobile applications today.
- **Real-time monitoring with analytical apps:** Analytical apps enable you to monitor and evaluate current data from your SAP system using analytical functions and KPIs to respond quickly to market conditions and operations.
- **Availability of SAP standard apps:** Several thousand standard apps are provided by SAP and already cover a large part of the relevant processes.
- **Future orientation:** SAP is continuously expanding Fiori and increasingly making the interface the standard UI for SAP applications. Some functions can only be performed in Fiori on current releases (e.g., bank account management).
- **Extensibility:** Both the interfaces and the functions in the SAP back end can be adapted and extended to your needs. This is achieved, among other things, through the support of classic web technologies such as XML and JavaScript.
- **Integration of existing applications:** Integrate existing WebGUI or WebDynpro applications into the Launchpad.

## Mobile SAP Fiori apps developed by clavis offer you the following features:

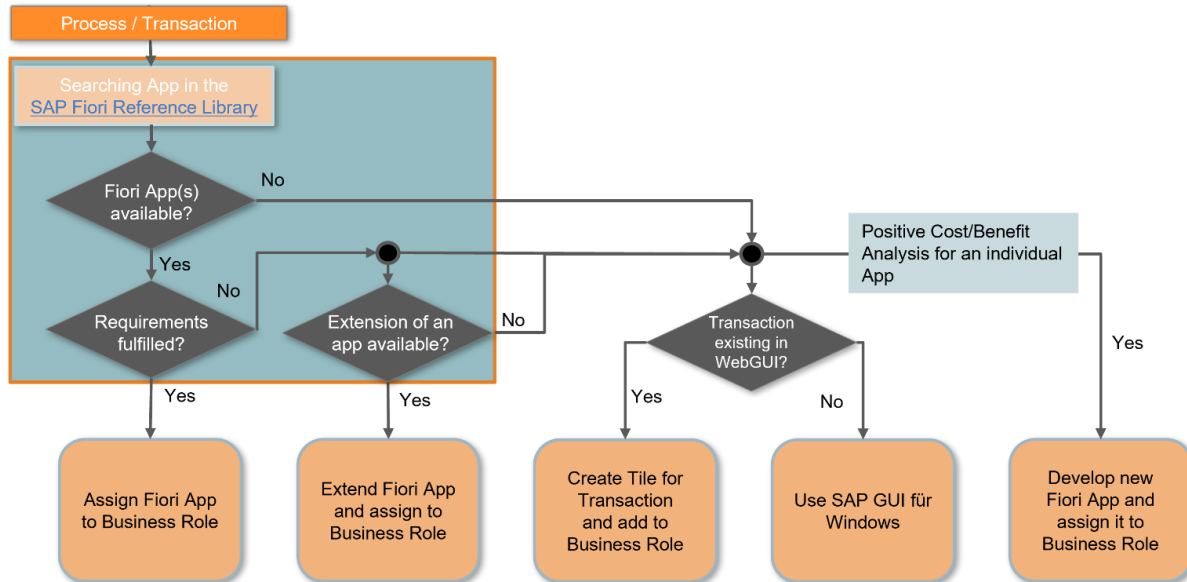

- For the use of clavisEspressivo the overview on the CEP deliveries
- clavis Fiori WM Apps - already usable under ECC 6.0 and further usable after migration to S/4H (prerequisite NetWeaver 7.4)
  - Confirm Transfer orders
  - WM Stock transfer
  - WM Inventories
- Analytical app to evaluate risk assessments and work permits
- clavis Fiori app in maintenance for mobile feedback of gas measurement values

## Suggested approach for finding and selecting Fiori apps (or UI)

Whether you want to develop customized apps or just want to check which apps are already available for you in the standard: we will find an individual solution for you!

## All apps are customizable to your needs and processes!

All apps are customizable to your needs and processes. Do you have customer-specific fields? No problem, because SAP Fiori App are extensible. Take a look at the [SAP Fiori Reference Library](#).

## Have we aroused your interest?

Please feel free to arrange a free, non-binding presentation with us!
