The new web application

Efficient and cost-effective
work safety on the web

clavisWebWorkSafety – the new web application

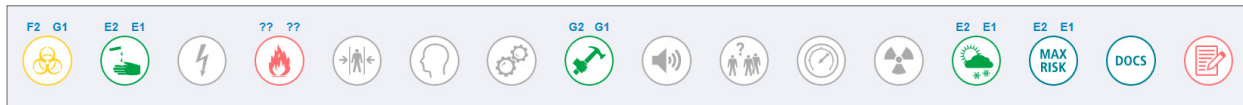

Over 10 years of project experience in the field of Environment, Health & Safety and more than 3 years of intensive development work have been incorporated into the conception and programming of clavisWebWorkSafety to make your daily work easier and above all – safer.

Despite the complexity and the dynamics of the application it is possible to work with clavisWebWorkSafety in a productive and safe way within no time. Since nothing is as frustrating as lacking acceptance regarding the new application among the employees the focus with respect to design and structure was placed on user-friendliness.

Creation of Risk-Assessments

In the web application clavisWebWorkSafety you may create risk-assessments with or without reference to your maintenance orders. In a dashboard, all of the already existing risk-assessments are displayed to you with their individual processing statuses. The risk-assessments contain all the information necessary for the work to be performed. It is yours to decide which data has to be maintained for the integrity of the risk-assessments and who (which person, role) has to provide this information.

Possible hazards are clearly classified in categories of hazards via icons. With these, the workplace, the work area and the activity-related hazards are rated by your company itself and also the external company. Regarding the existing hazards, suitable mitigation measures have to be selected. Through a complex calculation of possible impacts and the probability of occurrence of certain hazards in connection with the selected measures, the residual risk is determined.

Overview on all planned risk-assessments

clavisWebWorkSafety – more than just Risk-Assessment

Beyond the powerful functions of the creation of risk-assessments, you have the following digitalised functionalities at hand:

- Printing of individual work permissions (dynamic)
- Printing of additional documents as for example hazardous substances data sheets
- Creation of templates for illustrations of recurring activities
- Digital approvals
- Digital expectations of neighbouring companies

The screenshot displays the clavisWebWorkSafety web application interface. At the top, there is a navigation bar with a logo 'C', tabs for 'RA', 'Change Log', and 'Admin', and a search icon. Below this, a secondary navigation bar shows 'Work permits' (selected), 'Templates', 'Neighbour unit requests', and 'Approvals' (with a red notification badge '2'). On the right of this bar are buttons for 'Daily works', 'Refresh', 'Columns', and 'Filter'. Below the navigation is a date filter bar with buttons for dates from 14.09.2017 to 20.09.2017, with '20.09.2017' selected. The main content area is a table with columns: 'S' (status icon), 'RA no', 'Description', 'Workorder', 'Executer', 'Plant', and 'Work center'. Two rows of data are visible:

S	RA no	Description	Workorder	Executer	Plant	Work center
⚠	113939	Roof work P211 (incl edge protection)	000422788955	IPB process engineering		
✅	113938	Replace pump A991	000000000555	Abels crane coordination SEPO

*All necessary information at a glance:
the four-divided dashboard enables simultaneous working*

You want even more advantages? Here you are!

- **“Work safety to go, please”**

Weather using a tablet on-site or working on the computer in the office: the web application makes working multimedia fast and simple.

- **Saving time, gaining security**

The safety of work and the wellbeing of the employees rank first! We are not saving at the wrong spot: Through digital approval processes and the use of mobile devices you save time and money – at the same time your work safety is improved massively by our tool.

- **Interface to SAP – “Two become one”**

No double data maintenance! By means of a standardized interface we can, for example, import the data from maintenance notifications or maintenance orders as well as from technical objects directly from your SAP system into our clavisWebWorkSafety and transfer them into the risk assessments.

- **Your process in our application**

The software is adaptable and scalable to your specific-needs and requirements in a fast and simple way. Your approved processes and structures do not have to be changed for the use of our software – we adapt to you.

- **"I see something you do not see."**

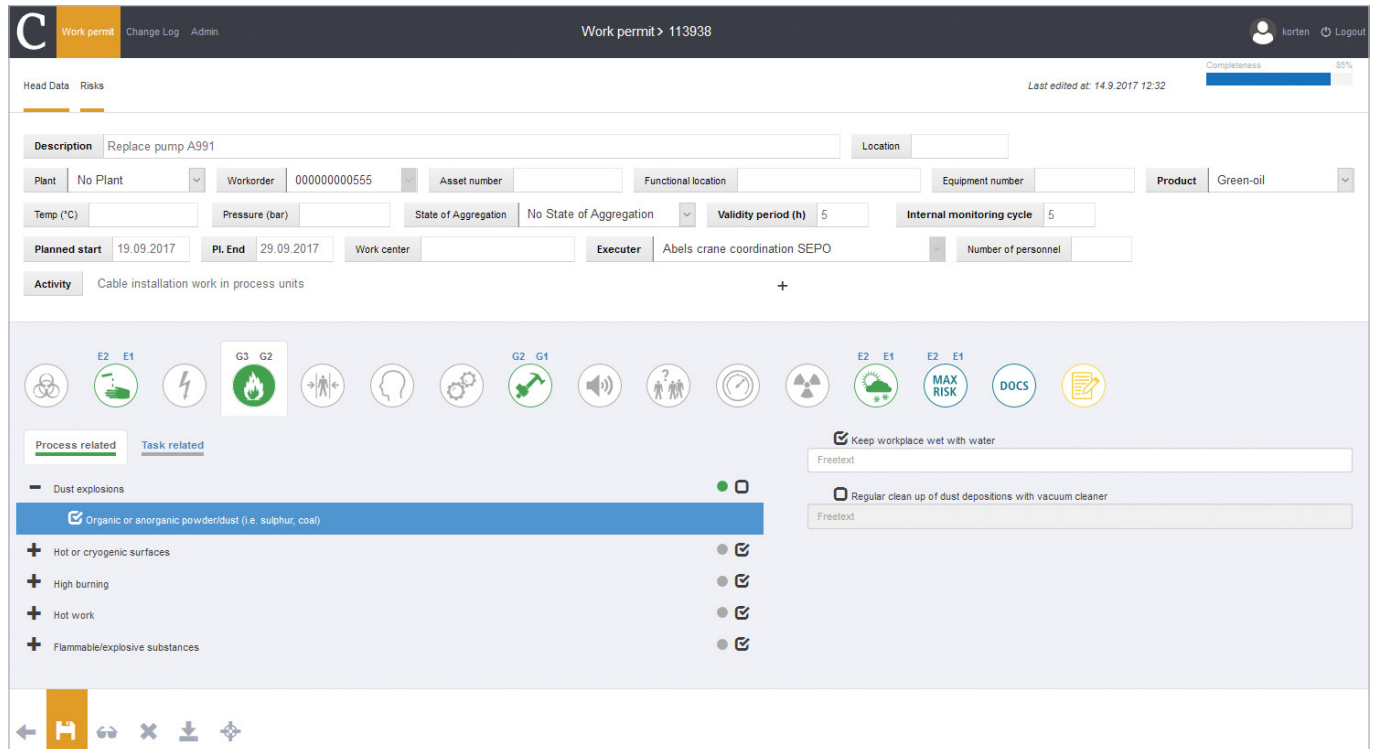

The strict division of the authorisations of your company and of the external company is controlled by an individual role- and authority concept.

- **Only a few clicks to obtain new approvals**

You need individual approvals? No problem. With only a few clicks this requirement can be fulfilled fast without much hassle in the separate administration area.

- **Around the clock**

The colour scheme can individually adapt itself to the daytimes or it can also be changed manually.

Clear assessment of risks and measures by visual support

Did we arouse your interest?

Please feel free to arrange your presentation date with us free of charge and without any obligations.

Directly in the system we show you how intuitive, simple and above all how safe working with clavisWebWorkSafety can be.
